

Post 2025 market design

GD and CM

Some terms

- Energy
- Generation
- Capacity, firmness
- Dispatch, scheduling
- Reliability
- Security
- Market participant
- Energy Security Board post 2025 market design

Features of energy markets today

Transitions and challenges

- Central to decentralised kit with centralised operation
- Big and individual to small and aggregated
- One way to two way flows
- Transmission to distribution connected
- Mechanical to power electronic
- High to low emissions
- Generation only to supply mix including storage and DR
- Emerging new constraints
- State to national and back again

Features not in the energy market today
